

The Roadmap of The Party of Competence and Development of Iran for National Renewal

I. Our Vision for Governance and Ethics

- **Elected Officials and Financial Integrity:** Our party believes that to prevent conflicts of interest, politicians and legislators should be prohibited from holding personal financial stakes in the markets. We propose that they may not receive payments from private organizations unless these funds are transparently directed to their political party or campaign efforts. Our goal is a system where any potential for financial influence on decision-making is demonstrably absent.
- **Independent Judiciary:** We will strive for a justice system that operates with complete independence and advocate for severe penalties for any attempts to compromise its integrity.
- **Equitable Government Services:** We aim for a system where access to premium or expedited government services, such as passport or permit issuance, is not determined by an applicant's ability to pay. We propose that urgent requests be considered based on documented need, with significant penalties for fraudulent claims.
- **Fiscal Transparency:** Our party is committed to ensuring the government provides clear and detailed accounts of how taxpayer money is expended.
- **Simplified Taxation:** We will work to design a simple tax system that enables the general public to file their annual tax reports without needing to hire expensive specialists.
- **Pro-Employment Tax Policies:** We seek to structure taxation policies to encourage, rather than discourage, hiring by employers, removing pitfalls that hinder job creation.

II. Our Plan for Military Reform

- **Professional and Well-Compensated Force:** Our vision is for the military to transition towards a more professional, permanent force, with a corresponding reduction in reliance on temporary reservists (mandatory service).
- **Increased Compensation and Respect:** To attract and retain high-quality permanent personnel, we will pursue a significant increase in salaries for lower-ranking soldiers and actively promote the prestige of military service.
- **Reduced Mandatory Service:** Our goal is to nearly halve the duration of mandatory military service as the professional force grows.
- **Political and Financial Neutrality:** We firmly advocate that all military personnel should be strictly forbidden from having political or financial interests that could compromise their duties and loyalty to the nation.

III. Our Goals for Economic and Financial Policy

- **A "Capitalist Socialist" Model:** We seek to create a financial system inspired by mixed economies. Our approach, inspired by Adam Smith's principles, prioritizes competition that benefits consumer satisfaction and long-term societal well-being over a short-term shareholder-focused model.
- **Government Backing of Banks:** We propose the establishment of a national treasury-like entity to provide emergency backing to banks, preventing systemic collapse.
- **Competitive and Open Markets:** We aim to open markets to global competition, ensuring citizens can afford and access goods from around the world. This will reduce the incentive for smuggling and black-market activities.
- **Facilitated Financial Systems:** Our party will support the development and regulation of modern financial infrastructure, including credit card organizations, credit scoring systems, and robust fraud prevention mechanisms.

IV. Our Approach to Social and Environmental Policy

- **A "Benefit of All" Mentality:** We will promote a societal ethos that encourages a collective approach to problem-solving ("let's fix it for the benefit of all") over an individualistic one. Our goal is to prevent extreme class stratification and foster a stronger sense of community and social responsibility.
- **Public Health:**
 - **Ban on Pharmaceutical Advertising:** We will work to ban direct-to-consumer advertising of prescription medications in public media.
 - **Accessible Healthcare:** We seek to provide public healthcare, but to discourage overuse, we propose a nominal co-payment for most visits, which can be waived for individuals who demonstrate financial hardship.
- **Environmental Initiatives:**

- **Combating Desertification:** We will push for strict regulations against deforestation and offer financial incentives to those who support reforestation efforts.
- **Investment in Solar Energy:** Our platform includes significant investment in both the harvesting of solar energy and research and development in this field.
- **Carbon Tax:** We propose introducing a carbon tax to incentivize industrial modernization and reduce reliance on personal vehicles.
- **Urban and Transportation Planning:**
 - **Investment in Sustainable Transport:** We will work to increase investment in bike lanes and provide subsidies for electric bikes and scooters.
 - **Encouraging Carpooling:** We support the establishment of dedicated lanes for vehicles with multiple occupants to promote carpooling.
 - **Reducing Car Dependency:** We aim for a significant reduction in car imports to counter the artificially created "prestige" associated with car ownership and to promote functionality instead.

V. Our Program for Agriculture and Food Security

- **Modernizing Agriculture:** We will work to modernize the agricultural sector to ensure its profitability and sustainability, providing viable, skilled employment for rural populations.
- **Strategic Crop Selection:** Our approach is to focus agricultural efforts on sustainable, strategic crops and rely on imports for items that are not economically viable to produce domestically.
- **Strict Food Safety Standards:** We insist on the establishment and enforcement of rigorous standards for the safety and health of food and crops.

VI. Our Commitment to Technology and Innovation

- **Investing in AI and Cloud Infrastructure:** We are committed to investing in artificial intelligence and cloud computing infrastructure, strategically located near energy generation sources.
- **Developing Native AI Capabilities:** We will focus on developing our own AI solutions tailored for key sectors, including defense, agriculture, and tourism.
